

Conclusion

Recent developments in tracking technology have opened up new possibilities for obtaining valuable information about the behaviors of customers in retail environments. TrackLab software is a tool which can make those possibilities to the consumer research community, enabling further insights into customer decision-making and purchasing behavior.

Acknowledgements

The software presented in this paper was developed partly with funding from the following research projects:

- E-Track project (<http://www.project-e-track.eu/>) which is a European Union project carried out in the context of the Galileo FP7 R&D program supervised by the GSA (No. 277679-2).
- E-MOSION project (<http://emosion-project.eu/>) which is European Union project from the AAL Association and ZonMw (No. AAL-2011-4-141).
- GATE VidART project (<http://gate.gameresearch.nl/index.php?pageID=18>) supported by IOCTRegie, the Netherlands Organisation for Scientific Research (NWO) and SenterNovem.
